Classification

+	Compliant
(+)	Compliant with restrictions
-	Not Compliant

Note

a	May contain impurities of extractable heavy metals, in amount below the limits recommended by ETAD (Ecological and Toxicological Association of Dyes and Organic Pigments Manufacturers)
b	Contains Copper in complex form as a component of the dye / pigment
c	Contains Pigment Black 7 and / or Pigment Orange 34 and / or Pigment Orange 13 (see the annexed informative)
d	Contains traces of polycyclic aromatic hydrocarbons (PAH)
f	May cause the liberation of traces of formaldehyde - we recommend testing on the finished textile
n	Suitable for application in standard printing processes. The limit of 20 ppm amine may be exceeded if improper or special conditions are applied (ex. low fixation time; poor binder quality in garment dyeing; discharge printing etc.) - We recommend testing on the finished textile
p	Suitable for products of Class III and IV

For further details, please refer to the products Material Safety Data Sheets and Technical Data Sheets.

The above does not absolve the user from making their own tests and controls to ensure that the finished textile article conforms to Oeko Tex requirements.

This holds especially for the requirement "fastness to saliva and perspiration" for Class I (baby) articles and extractable heavy metals, as they are influenced not only by the dyestuff used, but by many other process parameters.

Best regards
